

## OVERVIEW of ARCHITECTURE

ADASTrip is invoked by executing the module named STRIP. To run the zIIP version, module STRIP must be APF authorised and loaded from and APF authorised library. That is the only module that is APF authorised. STRIP checks its environment and if it is running APF authorised it attempts to use the zIIP feature. If not, it disables the zIIP feature and runs completely in normal TCB mode.

A special ADASTrip zIIP enabled codeword must be used otherwise an error message is returned and processing disabled.

## JCL CONSIDERATIONS

The APF authorised library that contains module STRIP must be in the STEPLIB. All other ADASTrip modules must be in the //PROGLIB DD concatenation. Here follows an example of JCL to execute ADASTrip in zIIP mode.

```
//<<jobcard>>
/*
/* Test ADASTrip with zIIP support against a database.
*/
/*
//DEL EXEC PGM=IDCAMS,REGION=5000K
//SYSPRINT DD SYSOUT=*
//SYSIN DD *
  DELETE 'CCA.ADASTrip.ZIP.TEST2'
  SET MAXCC=0
//STRIP EXEC PGM=STRIP,REGION=10M,
//          PARM='provide zip code'
//STEPLIB  DD  DSN=HLQ.AUTH.TEST.LOAD,DISP=SHR
/*
/* Copy load module STRIP to an AUTH load lib
//PROGLIB  DD  DSN=CCA.ADASTrip.ZIP.LOAD,DISP=SHR
//SYSABEND DD  SYSOUT=*
//STPRINT  DD  SYSOUT=*
//STMESS   DD  SYSOUT=*
//STDEBUG  DD  DSN=CCA.ADASTrip.ZIP.CNTL(STDEBUG),DISP=SHR
/*
//STASSO   DD  DSN=SAG.ADABAS.DB00001.ASSOR1,DISP=SHR
//STDATA   DD  DSN=SAG.ADABAS.DB00001.DATAR1,DISP=SHR
//SORTWK01 DD  UNIT=SYSDA,SPACE=(CYL,10)
//SORTWK02 DD  UNIT=SYSDA,SPACE=(CYL,10)
//SORTWK03 DD  UNIT=SYSDA,SPACE=(CYL,10)
//SORTOUT   DD  UNIT=SYSDA,SPACE=(CYL,30)
//SYSOUT    DD  SYSOUT=* SORT MESSAGES (MAY VARY WITH SORT PACKAGE)
//TESTA     DD  DSN=CCA.ADASTrip.ZIP.TEST2,DISP=(,CATLG,CATLG),
//          SPACE=(CYL,(1,1),RLSE),UNIT=SYSDA,BLKSIZE=0,
//          LRECL=23000,RECFM=VB
//STPARM   DD  *
FIELDTAB 4
TESTA    TEST 1 AC.EQ.C'SIMONE'
TESTA    RULE 1
TESTA    FILE 1
TESTA    FIELDS ## **
```
