

## AUDITRE Version 4.x Release Notes June 2014

Treehouse Software, Inc. is pleased to announce the release of AUDITRE v4.x.

Auditre v4.0.1 – release date June 2014

Auditre v4.0.1 has been tested using Adabas v7.4, v8.1.3, and v8.2.4. Auditre may support releases of ADABAS later than v8.2.4, but since those releases were not available at the time of this release, Treehouse Software, Inc. cannot be certain that Auditre v4.0.1 will support these later releases.

### Fixes/Enhancements

- Specifying AUDPRT99 in the Auditre JCL and an optional run time parameter of PARM=SUMMARY will generate the end of detail report statistics and the end of summary report statistics, as well as the end of job statistics in AUDPRT99.

To trigger the statistics to print to AUDPRT99 execute Auditre with a SUMMARY parameter specified on the exec statement. The format for the statement is:

```
//AUD1 EXEC PGM=AUDITREx,PARM='SUMMARY'
```

In addition, a new DD should be added to the JCL for AUDPRT99, similar to the AUDPRT01 statement.

```
//AUDPRT99 DD SYSOUT=*
```

If AUDPRT99 is written to a dataset, it should be defined with LRECL=133, FBA (reference 24310)

- New log analysis parameters STARTDATE, STARTDATE4, STARTTIME
- AUDITRE will now execute above the line, removing the 32K limit on the SHOW Statement (REQUIRES AMODE=31) (reference 24492)
- Corrected the decompression of large alpha fields (reference 24300)
