AUDITRE Version 5.2.2 Release Notes September 2021

Treehouse Software, Inc. is pleased to announce the release of AUDITRE v5.2.2.

Auditre v5.2.2 – release date September 2021

AUDITRE v5.2.2 has been tested with PLOG data from ADABAS v6 up to v8.5.3.

Support for AUDITRE v4.1.2 and below will be discontinued on March 21, 2022.
Support for AUDITRE v5.2.1 will be discontinued on September 30, 2022.

AUDITRE may support releases of ADABAS later than v8.5.3 but since those releases were not available at the time of this release, Treehouse Software, Inc. cannot be certain that AUDITRE v5.2.2 will support these later releases.

Note:

AUDITRE7 and AUDITRE8 both will support the PLOG versions mentioned above. However, AUDITRE7 may report incorrect results or create incorrect output files should there be a PE and/or MU field with more than 255 occurrences.

Fixes/Enhancements

Full support of all currently available ADABAS PLOG formats

Support for large ISN values (up to 4,294,967,294)

Correct TSN value

Spanned record support.

If files needed for AUDIT/SHOW functions have spanned block records, then SRLOG=ALL must be defined in the ADARUN parameters of the nucleus.

Any other specification of SRLOG= or using the default value will prevent proper functionality of AUDITRE and lead to unpredictable results.

Refer to Append B – Output Dataset formats for details.
