

## **SECURITRE Version 4.2.2 Release Notes September 2021**

Treehouse Software is pleased to announce the release of SECURITRE Version 4.2.2.

SECURITRE v4.2.2 supports NATURAL versions 4.1.x, 4.2.x, 8.2.x and 9.1.x. Securitre v4.2.2 supports ADABAS versions 8.1 up to 8.5.3. The minimum maintenance level for ADABAS v8.1 is v813 with zap AN813183 applied.

NATURAL versions 3.1.6 and higher, in conjunction with Adabas 7, are supported by SECURITRE v3.3.1.

End of Maintenance (EOM) dates:  
Securitre v3.3.1 EOM March 1, 2022

### **Installation Notes:**

The NATURAL parameter definitions must be checked and modified because the RDC interface is implemented differently. For more information refer to **Section IX.4.9.1 Extend NATPARM definitions** of the SECURITRE Installation manual.

A new option CALLSAF=FIRST/ALL is provided for those creating audit reports based on the SMF records written by RACROUTE macro. Refer to **Section II.1 SECURITRE for ADABAS – Parameters** in the SECURITRE Administrator manual for detailed instructions.

Securitre for NATURAL now allows for wildcards in the DDM id of the STNDDM macro to reduce number of definitions.

### **Summary of changes for version 4.2.2**

- ADABAS 8.5 support
- Support lower-case field names
- CALLSAF= support general or per file (#38998)
- Correct parameter list for exit 2 (#31753)
- Do not intercept eventlog calls in UEX4 (#19278)
- Enhanced RDC interface for STN  
No longer using hard coded NATURAL exits (NATUEX1, DCNNEXn)
- STNDDM now accepts wild characters in DDM.name  
Parameters have changed, please review the Securitre manual for details.
